Dear Second Grade Families,

Congratulations to your child for completing a full year of math learning! This year in second grade, the students grew and developed their mathematical thinking and problem solving skills. They also used the foundational skills they learned in second grade to expand their thinking and problem solving skills. We focused on the process of how problems are solved and explored the most efficient and accurate math strategies to help us find our answers.

The purpose of this packet is for your rising third grader to maintain their skills over the summer. You and your child may decide the areas that need revisited and create a schedule to sustain learning and practice over the summer. The completion of this packet is not required, but it may provide you with a resource to practice skills that were covered in second grade. These concepts include:

- Numbers to 1,000
- Addition and subtraction up to and from 1,000
- Multiplication and division
- Multiplication tables of 2, 3, 4, 5, 10
- Using bar models for addition and subtraction
- Time
- Fractions
- Mental math strategies
- Money

In addition to the math packet, your child may also benefit from using these resources.

IXL.com/math- Students can gain fluency and confidence in math. IXL helps students master essential skills at their own pace through fun and interactive questions, built in support, and motivating awards.

splashlearn.com- Students practice math skills through a personalized learning path and interactive games.

Have a fun summer, and I look forward to seeing you in August!

Warmly,

Laura Greif
